

Homework 9

We need to use the correct versions of solana-cli

Re install your solana command line with

```
sh -c "$(curl -sSfL https://release.solana.com/v1.18.9/install)"
```

1. Work through the CPI example : example4-cpi. You can run it with

```
npm run build
npm run deploy:4
npm run call:4
```

This program receives no instruction data, no accounts and it only logs a message using the `msg!` macro that can be viewed in the window running `solana logs`

2. Work through the compute budget example : example5-compute. You can run it with

```
( npm run build )
npm run deploy:5
npm run call:5
```

3. Work through the PDA example : example6-pda

You can run it with

```
( npm run build )
npm run deploy:6
npm run call:6
```

4. Anchor : Create a hello world project, follow the instructions [here](#)
